The Process

Nangka Juice is a thirst-quenching drink derived from the Jackfruit concentrate, a by-product of Dehydrated Jackfruit. The Jackfruit concentrate contains nutrients thus instead of throwing it away, it is made into a delicious Nangka Juice.

To make the syrup

- 1 Remove the pulp from the whole fruit.

- 2 Cook pulp in syrup (sugar and water). Soak the mixture overnight.

- 3 Separate pulp from the liquid. Pasteurize the liquid concentrate.

- 4 Place liquid concentrate in a clear container. Keep in a fridge

To make the Nangka Juice

- 1 Slice calamansi or lemon.

- 2 Pour calamansi juice into a glass container.

- 3 Pour in concentrated nangka syrup.

- 4 Add water to desired taste.

- 5 Bottle finished product. Store in a freezer.
